## 1 Sampling From Discrete Distributions

J, and this can be used to generate from the distribution of  $X$ . As an example, suppose that  $X$  takes values in  $S = \{1, 2, 3\}$  with probability mass function defined by the following table:

$X$	$P(X=x)$
1	$p_1$
2	$p_2$
3	$p_3$

To generate from this distribution we partition  $(0, 1)$  into the three sub-intervals  $(0, p_1)$ ,  $(p_1, p_1 + p_2)$ , and  $(p_1 + p_2, p_1 + p_2 + p_3)$ .

## Some Discrete Distributions

**MINMNI**: This comes up in sampling without replacement: if there are  $N$  balls, of which  $M$  are one color and the other  $N - M$  are another, and we choose  $n$  balls at random without replacement, then  $X$  represents the probability of having  $i$  balls of the first color.

Another model where the hypergeometric distribution applies is the urn model.
